

PROMETHEUS NEWSLETTER

Month of October

NEW TESTING MATERIALS

We recently purchased a wide array of technology including Raspberry Pi's, Samsung Tablets, and Arduinos. This will help to further aid the development of our prototypes in the coming months.

3D PRINTING OF PROTOTYPES

With the recent opening of Cornell Maker Space on campus, our team will have access to affordable and rapid 3D printing, despite issues experienced last month. We plan to bulk order our prototypes in the near future.

NEW SOLUTION

Our hardware team has solved a problem regarding internal components by printing the components for the keyboard with a special filament via Graphene Lab.
