PROMETHEUS MONTHLY PROGRESS REPORT

MONTH OF MAY 2017

Good evening and welcome to the fourth Prometheus progress report. Our reports will now be held monthly. This month we further developed our first prototype and expanded our business plan.

## COMPETED AT THE Engineering Innovation Award Competition

The team prepared for the competition and competed on May 15th. We are currently still waiting to hear back for feedback and results. The team had a great time and saw the competition as a great opportunity to practice our pitch skills. Please feel free to contact us for a copy of our presentation and other informative documents.

BEGAN THE Rev Hardware Accelerator

This week we also began the Rev Hardware Accelerator, a state of the art program providing young local entrepreneurs with the tools and machines to rapidly prototype and develop the technology behind tech start-ups. Goals for the next couple weeks include developing our first prototype and exploring new markets.

BEGAN DEVELOPING our First Prototype

On top of competing in the innovation competition, our hardware and software teams have both worked rigorously to outline our first prototype. The estimated completion date of our first prototype should be early June. By the next monthly report, we will have gone through at least two iterations of our prototypes.

QUICK HIGHLIGHTS

- Our website is now fully optimized for mobile as well. Please feel free to visit it at https://prometheus-corp.github.io/.
- Our current projected timeline puts the first Prometheus Keyboard Model 1 to be released in August 2017. The first model will be open to local Cornell Alpha testers to help control and optimize the development of the Model 2, scheduled for release in early 2018.

Ask: Engineers with electrical experience that are willing to consult with the development of circuit boards, please feel free to contact jt665@cornell.edu
